

Security of Information and Communication Systems

INSTALLATION

Table of contents

Project : ALCASAR	Author: Rexy with support of "Alcasar team". Thanks to translators.
Object : Installation	Version: 3.0
Keywords: captive portal, Network Access Control (NAC), accountability, traceability, authentication	Date : 2016, July

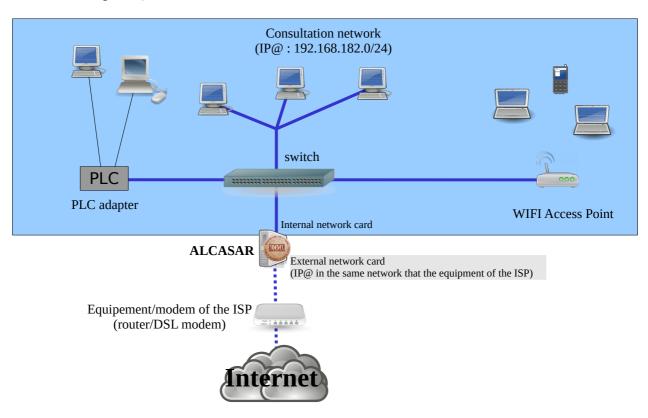

1. Introduction

This document describes the installation procedure of the ALCASAR portal. It is supplemented with three other documents: the presentation document, the operating instructions document and the technical document.

If you already have a working version of ALCASAR and you want to upgrade it, please refer to the operating instructions document (chapter « update »).

ALCASAR can be installed on a standard computer with two Ethernet network cards. The first one (eth0) is connected to the Internet Service Provider's equipment. The second one (eth1) is connected to the switch used to service the network consultation computers.

By default, the IP address of this second network card is: 192.168.182.1/24. This allows to have a class C network (254 equipment). This network addressing plan can be modified during the installation stage. For all equipment of consultation network, ALCASAR is the DHCP server, the DNS server, the network time server and the default router (gateway). **Thus, on this network, there must be no other DHCP server and gateway** (check your Wi-Fi access points).

Examples of IP addressing plans

Parameters	@IP of the network	Number of equipment	Network mask	(this address is the IP address of the	DNS sufix
Classe				DNS server and of the default gateway	
Default IP address plan (C class)	192.168.182.0/24	253	255.255.255.0	192.168.182.1/24	localdomain
B class IP plan	$172.16.x.0/16 1 \le x \ge 255$	65533	255.255.0.0	172.16.x.1/16	localdomain

Even if it is possible to define a class A network, you shouldn't do it because the embedded DHCP server will have to manage over than 16 million IP addresses. The management of such volume of addresses would spend too much memory.

2. Installation

The installation of the portal consists of two steps. The first one is the installation of a minimalist Linux operating system based on Mageia 5.0. The second step installs and configures all the components of ALCASAR.

2.1. <u>Hardware requirement</u>

ALCASAR only requires one standard desktop computer with two network cards and a hard drive with a capacity of at least 100 Go in order to be able to store logs related to connections tracing. ALCASAR includes several optional filtering systems (network protocols, URL, IP addresses, domain names and antimalware). If you decide to enable these filtering systems, it is recommended to install at least 8 GB of RAM in order to ensure an acceptable processing speed (ALCASAR loves the RAM ;-))

<u>In case of using a Virtual Machine (VM)</u>: be sure that the size of the hard drive **isn't smaller than 30G**.

2.2. <u>Installation of the system</u>

The installation procedure of the operating system is the following (estimated time : 6') :

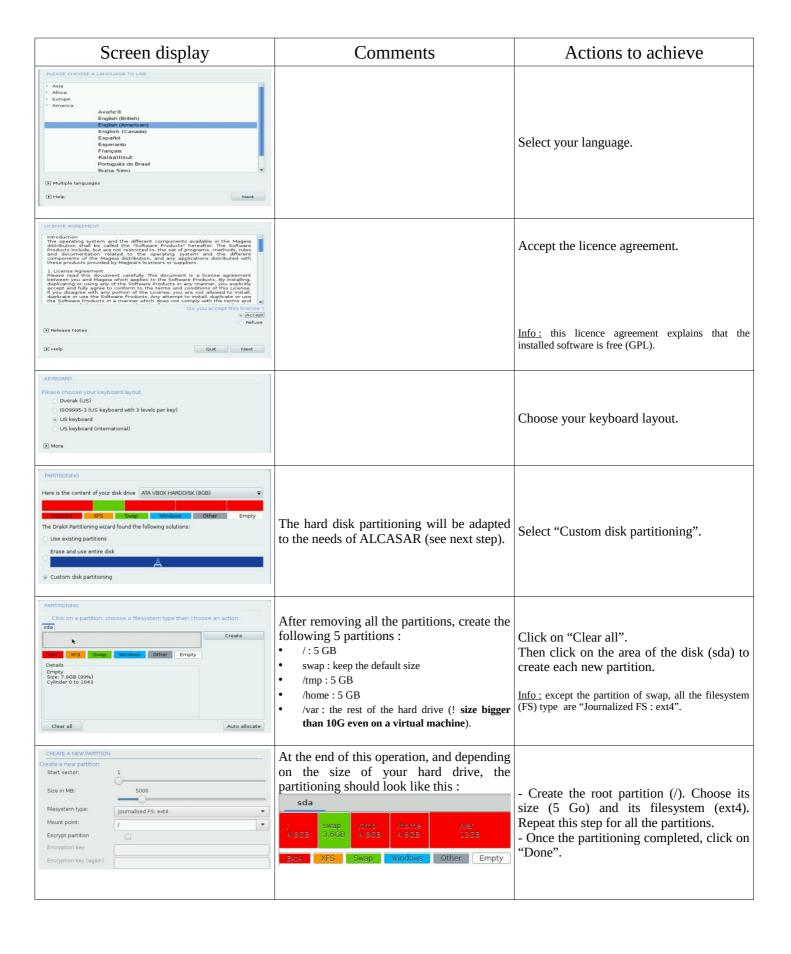

- get the Mageia5.0 ISO image file in double architectures (32 and 64 bits): « mageia-5-dual-DVD.iso » (1.2 GB). This ISO image is available on ALCASAR website as well as on several mirror sites of Mageia. For example:
 - http://www.mirrorservice.org/sites/mageia.org/pub/mageia/iso/5/
 - http://distrib-coffee.ipsl.jussieu.fr/pub/linux/Mageia/iso/5/
- burn this ISO image file on a DVDROM or create a bootable USB flash drive¹. You can also use an external USB disk which simulates a bootable device (ex : zalman zm-ve300 or 400).
- Configure the BIOS settings to unset the "Secure Boot" option, to set the date and time and to enable booting from the CD or USB flash drive. At the end of the installation, configure, once again, the BIOS settings to only boot from the hard drive;
- insert the CD-ROM or the USB flash drive, reboot the computer and follow the instructions below :

Screen display	Comments	Actions to achieve
ö mageja Boot from Hard Disk British Mageja 5	After starting the computer, this screen is displayed.	
Rescue System Memory Test Hardware Detection Tool F1_Help F2_Language F1 800 x 800 F4 CD-80M_F5 Driver_F6 Kernel Option	* If the graphical mode doesn't work, you have to configure the BIOS settings to allocate more than 2 MB of shared memory for the graphics card.	Select "Install Mageia 5".

¹ Two solutions are used to create a bootable USB flash drive :

[•] in graphical mode you can use "rufus" or "win32 disk image" (Windows) or "isodumper" (Linux)

[•] in console mode on Linux, plug the USB flash drive and get the name of the device with the "*fdisk-l*" command (an USB flash drive is usually "/dev/sdb" or "/dev/sdc"). Run the command : "*dd if=<name_of_ISO_image> of=<name_of_usb_drive> bs=1M*".

Screen display	Comments	Actions to achieve
MEDIA SELECTION The following media have been found and will be used during install: - Core Release Norifree Release. Do you have a supplementary installation medium to configure? • None - CD-ROM - Network (HTTP) - Network (FTP) - Network (NFS)	For ALCASAR, it does not need any other media.	Select "None" then click "Next"
MEDIA SELECTION Here you can enable more media if you want. Some hardware on your machine needs some non free firmwares in order for the free software drivers to work. You should enable "Nonfree Release" Core Release Nonfree Release		Leave the "Nonfree Release" media enabled then click "Next"
PACKAGE GROUP SELECTION Workstation Server Graphical Environment Individual package selection Total size: 1521 / 3464 MB Help Unselect All Next	Package group selection : ALCASAR only requires a very minimal install.	Select "Unselect All" then click "Next". Info: On Linux, a package is an archive file containing all the components of a software (binary files, help files, configuration files, etc.).
TYPE OF INSTALL		Select only "Install recommanded packages" and the basic documentation, then click "Next". The copy of the packages is launched. Estimated time: 2'
USER MANAGEMENT - Set administrator (root) password Password (again) - Enter a user Icon Real name sysadmin Sysadmin Password Pa		Assign a password to the "root" account, then, create the "sysadmin" account and assign it a password.
User management Configure Services - 11 activated for 13 registered Configure + Hardware Keyboard - French Mouse - Universal Any P5/2 & USB mice Configure Graphical interface - not configured Configure + Network & Internet Network - ethernet Proxies - not configure Configure - Security Firewall - activated Configure	Configuration of Internet access	Click on "Configure" in "Network- ethernet" in the "Network & Internet" section.
NETWORK & INTERNET CONFIGURATION Choose the connection you want to configure Wired (Ethernet) Satellite (DVB) Cable modern DSL ISDN Wireless (Wi-Fi) GPRS/Edge/3G Blustooth Dial Up Networking Analog telephone modern (POTS)		Select the type of Internet connection. In the case of use of an ISP broadband modem, choose "Wired (Ethernet)". Info: no test has yet been made on other types of Internet access.

Screen display	Comments	Actions to achieve
NETWORK & INTERNET CONFIGURATION Ethernet Select the network interface to configure: enp0s8: Intel Corporation 82540EM Gigabit Ethernet Controller enp0s3: Intel Corporation 82540EM Gigabit Ethernet Controller	For the moment, only the interface connected to the broadband modem of the ISP will be configured. The second interface, connected to the consultation network, will be configured later, during the installation of ALCASAR.	Select the interface to configure. Tips: Choose the interface with the smallest index. Write the name of this interface on a paper. Info: the names of interfaces are linked with the physical architecture of your PC. They could differ from the printscreen.
NETWORK & INTERNET CONFIGURATION Ethernet Please select your connection protocol. If you do not know it, keep the preselected protocol. Automatic IP (BOOTP/DHCP) Manual configuration		Select "Manual configuration" Info: While it is possible to let this interface in "bootp/dhcp" mode, we recommended configuring it manually in static mode.
NETWORK & INTERNET CONFIGURATION	 Example: IP address: this address must be in the same subnet as the address of the broadband modem. Netmask: 255.255.255.0 Gateway: This is the address of the broadband modem DNS 1 and DNS 2:* Host name: Leave this field blank 	* Enter the parameters of this interface * Enter the IP addresses of the DNS servers provided by your ISP. You can also use other DNS servers. Examples: • Free project "OpenNic" (see the web site to know the closest servers for you) • project "OpenDNS" (DNS1=208.67.222.222, DNS2=208.67.220.220) • google (DNS1=8.8.8.8, DNS2=8.8.4.4).
Ethernet Connection control Allow users to manage the connection Start the connection at boot Enable traffic accounting Allow interface to be controlled by Network Manager Automatic		Select only "Start the connection at boot"
NETWORK & INTERNET CONFIGURATION Do you want to start the connection now? Yes No	It is not necessary to start the connection now.	Select "No"
NETWORK & INTERNET CONFIGURATION Congratulations, the network and internet configuration are finished.		Click on "Finish"
User management Configure Services - 11 activated for 13 registered Configure - Hardware Keyboard - French Mouse - Universal Any PSI2 & USB mice Graphical interface - not configure - Network & Internet Network - network::connection::ethernet Proxies - not configure - Security Firewall - activated Configure Next		Click on "Next"
Vou now have the opportunity to setup online media. This allows to install security updates. To setup those media, you will need to have a working Internet connection. Do you want to setup the update media? Yes No	Security updates will be managed during the installation of ALCASAR.	Select "No" and click on "Next"

Screen display	Comments	Actions to achieve
Congratulations, installation is complete. Remove the boot media and press Enter to reboot. For information on fixes which are available for this release of Mageia, consult the Errata available from: http://www.mageia.org/ information on configuring your system is available in the post install chapter of the Official Mageia User's Guide.	The installation is finished.	Click on "Reboot" Remove the CDROM or the USB flash drive. Reconfigure the BIOS to boot only from the hard drive.

2.3. Installation of ALCASAR

Configuration of the network cards

Screen display	Comments	Actions to achieve
Mageia release 5 (Official) for x86_64 Kernel 3.19.8-desktop-3.mga5 on a x86_64 / tty1 localhost login: root Password: _	Disconnect the cables of the two network cards. Log in as root	
		ethtool -p enp0s3
	Run the blinking of the LED of the network card configured previously.	On this blinking interface, connects the cable linked to the ISP broadband modem (Internet access).
	Stop the blinking	Ctrl> + c Info: replace "enp0s3" with the name of the network card you've configured previously (see Page 5). The commands « ifconfig » or « ip link » display the name of all the network card connected in your PC.
Link detected: yes	Verify that the link is up on this interface.	watch ethtool enp0s3 Info: the last line display the link state (Link detected Wait until the link is up. Otherwise, plug the cable into the other network card. When the link is detected, stop the command with the
	Do the same operation with the second card (eth1) and the cable connected to the consultation network.	watch ethtool xxxxxx Info: On the consultation network's side, connect a network equipment (Ethernet or PLC switch, WIFI AP, etc.) to ensure a permanent network link even if all consultation stations are off.
[root@localhost -]# ping -c3 www.google.fr PING www.google.fr (216.58.211.99) 56(84) bytes of data. 64 bytes from par@3515-in-f99.le1@0.net (216.58.211.99): icmp_s 64 bytes from par@3515-in-f99.le1@0.net (216.58.211.99): icmp_s 64 bytes from par@3515-in-f99.le1@0.net (216.58.211.99): icmp_s www.google.fr ping statistics 3 packets transmitted, 3 received, 0% packet loss, time 2003ms rtt min/avg/max/mdev_= 28.971/29.768/30.546/0.658 ms	Test your Internet connectivity	ping -c3 www.google.com

Download the installation file

This file is an archive file named: alcasar-x.y.tar.gz ('x.y' means the version number you want). You can download it in two different ways (USB flash drive or FTP):

• <u>via an USB flash drive</u>: Download the latest version on the ALCASAR website and copy it on an USB flash drive. Then, use the following procedure to copy it on ALCASAR computer:

Screen display	Comments	Actions to achieve
Troot@localhost -]s Fdisk -1	Insert the USB flash drive. Display information on mass media storage to get the name of your USB flash drive. In this example, "/dev/sdb1" is a 1 GB USB flash drive.	fdisk -l Info: You also can display the system log to get this name (journalctrl -f).
<pre>[root@localhost ~]# mkdir /media/usb [root@localhost ~]# mount /dev/sdbl /media/usb/ [root@localhost ~]# cp /media/usb/alcasar-* . [root@localhost ~]# umount /media/usb/</pre>	 Create a directory and mount the USB flash drive on it. Copy the archive of ALCASAR to the directory "/root". Unmount the USB flash drive. Unplug it. 	mkdir -p /media/usb mount /dev/sdb1 /media/usb/ cp /media/usb/alcasar-* /root/ umount /media/usb Info: Replace "sdb1" with the device name retrieved in the previous step.

• <u>via FTP</u>: directly from the ALCASAR computer, download the archive file from the FTP server:

Screen display	Comments	Actions to achieve
<pre>froot@localhost ~1# Iffp ftp.alcasar.net/pub cd ok, cwd~pub ftp ftp.alcasar.net/pub> cd stable cd ok, cwd~pub>stable ftp ftp.alcasar.net/pub>stable> ls ftp ftp.alcasar.net/pub>stable> ls -ru-r 1 root root 87551826 Oct 16 05:35 alcasar-2.8.1.tar.gz -ru-r 1 root root 87547182 Jan 27 2014 alcasar-2.8.tar.gz fftp ftp.alcasar.net/pub>stable> get alcasar-2.8.tar.gz fftp ftp.alcasar.net/pub>stable> bye froot@localhost ~1#</pre>	 Connect to the FTP server with the "lftp" command change to the directory "stable" and list its content download the archive file quit 	lftp ftp.alcasar.net/pub cd stable ls get alcasar-x.y.tar.gz bye

<u>Installation</u>

Screen display	Comments	Actions to achieve
[root@localhost ~1# sha256sum alcasar-2.7-test.tar.gz aa6a86936664eb289b8aa7e2168fd8358094c6785de3ae27d1881d29492477ba	Compute the SHA256 digital footprint of this archive and compare it with that of the website.	sha256sum alcasar-x.y.tar.gz Info: If the digital footprint doesn't match, download the archive again. If the problem occurs one more time, ask the developer team via the forum.
[root@localhost ~]# tar -xvf alcasar-3.0.tar.gz _ [root@localhost ~]# cd alcasar-1.3.0/ [root@localhost alcasar-1.3.0]# _ [root@localhost alcasar-1.3.0]# sh alcasar.sh -i_	 Uncompress and extract this archive. Move to the directory of ALCASAR and run the installation script. 	tar -xvf alcasar-x.y.tar.gz cd alcasar-x.y sh alcasar.sh -i

Estimated time : 3'	
ALCASAR UZ.7 Installation Application Libre pour le Contrôle d'Accès Sécurisé et Authentifié au Réseau Enter the name of your organism :	Enter the name of your organization (without spaces)	Example: rasacla Info: This name is mandatory. The only characters allowed are: [a-z] [A-Z] [0-9] [-]
#LCNSAR VZ.7 Installation Application Libre pour le Contrôle d'Accès Sécurisé et Authentifié au Réseau The default HLONSAR IP address on consultation network is : 192.188.182.1.24 The object of the use this IP address and this IP addressing plan (recommanded) (7/n)7 : n Enter #LCNSAR IP address in CIBR format (a.b.c.d/xxx) : 172.16.8.1.24	Define the IP address of ALCASAR and the network addressing plan of the consultation network. You can accept the default one or change it.	Enter « Y » or « N » Info: If you type "N", the script will ask you for the IP address of ALCASAR and the subnet mask in CIDR notation (ex: 172.16.0.1/16)
ALCASAR UZ.7 Installation Application Libre pour le Contrôle d'Accès Sécurisé et Authentifié au Réseau Define the first account allow to administrate the portal : Account : _	Enter the username and password for a first ALCASAR administrative account.	Info: This Linux account is used to administer ALCASAR from the consultation network via the graphical control center (http://alcasar). This is not a consultation user account.
Enf of ALOSARR install process Application Libre pour le Contrôle Authentifié et Sécurisé Application Libre pour le Contrôle Authentifié et Sécurisé des Accès au Réseau (ALOSAR) The System will be rebooted in order to operate ALCASAR Read the exploitation documentation The ALCASAR Control Center (ACC) is at http://alcasar Hit 'Enter' to continue	The installation is complete. The system will be restarted to synchronise all components of ALCASAR.	Once the system is restarted, connect equipment on the consultation network and use it for log in on the portal (http://alcasar). Create the first users. Read the operating instructions carefully ("alcasar-exploitation-en.pdf").
alcasar-rexy-um:"# alcasar-daemon.sh 20 services needed by ALCASAR are started. All is ok alcasar-rexy-um:"# _	Once the system is restarted, you can check that all needed services are really started. Login on the system and run the command "alcasar-daemon.sh".	If one or more services are not started, the script will attempt to start them.

3. Stop, uninstall, reinstall or update ALCASAR

You can stop the ALCASAR computer with the power button, or with the command « *poweroff* » or via the WEB ALCASAR Control Center (ACC).

You can uninstall the portal with the command « *sh alcasar.sh --uninstall* ». This command uninstalls only ALCASAR. The operating system (Linux Mageia) is still present.

If you launch the installation again or if you launch the installation of a newer version on a running version of ALCASAR, the script will ask you if you want to perform an update.

4. Preparation of an off-line installation

This procedure allows you to install ALCASAR in offline mode. This can be useful when you manage to install ALCASAR in a place with a lack of Internet bandwidth. In this case, it's interesting to create an archive file of all the packages (RPMS) needed. This file will be used instead of the Internet downloading. Use the following procedure:

- <u>Creation of the RPM archive file</u>: on a new PC, install "Mageia Linux" as describe in §2.2. Then, retrieve and uncompress the last ALCASAR archive. Go to the scripts directory « <u>cd alcasar-x.y/scripts/sbin</u> » and run the script « <u>./alcasar-rpm-download.sh</u> ». This script will create the RPM archive file of your PC architecture (32 or 64 bits). Retrieve this archive file on a USB key.
- Offline installation: after installing the system, retrieve the RPM archive file. Uncompress it and go in its directory. Install all the RPM (*urpmi –no-verify-rpm* *). Then, follow the installation process describes in chapter §2.3.

5. ALCASAR settings sheet

The file « /root/ALCASAR-passwords.txt » contains passwords used internally by the different modules of ALCASAR. It contains, more particularly, the password protecting the bootloader (« GRUB »). It can be consulted via the command « cat /root/ALCASAR-passwords.txt ». Be careful : when you enter the GRUB password, you keyboard is map like a "qwerty" keyboard.

Organization name :	
Users authentication page	This page is displayed when a browser tries to access a website.
Portal page allowing: • the administrator to access the control center. • The users to • log them out • change their password • install the certificate of the Certification Authority (C.A.) in their browsers.	http://alcasar or http://alcasar.localdomain Info: The possibilities of the ALCASAR Control Center (ACC) are described in the "ALCASAR-exploitation" document.
